Git Course

Session 1: Basics

with Soufiane

Course Plan

01
What Is Git?

02
Why Use Git?

03
Git vs GitHub vs GitLab

04
How Git Works

05
Basic Commands

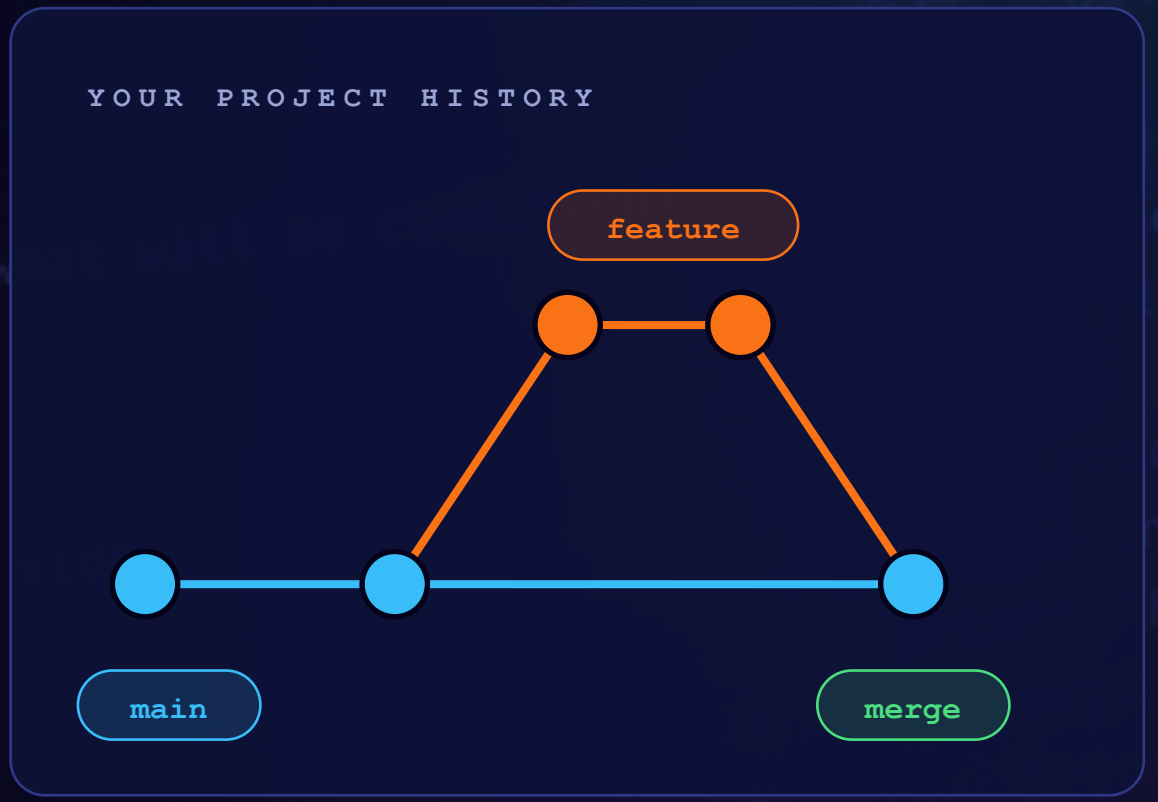

06
Live Demo & Practice

AppsClub

What Is Git?

A Version Control System

A Version Control System (VCS) is a tool that **tracks changes** made to files over time. It allows developers to keep a **history** of their work, **restore previous versions**, and **collaborate** with others efficiently. **Git** is one of the most widely used version control systems.

AppsClub

Why Use Git?

Track changes

See who changed what, and when.

Work as a team

Many developers, one project.

Experiment safely

Test ideas on a branch, not on main.

No More "final_final_v2"

✕ Without Git

- projet_final.c
- projet_final_v2.c
- projet_final_vraiment_final.c

✓ With Git

- feat: add interface
- fix: display bug
- init: empty project

Git vs GitHub vs GitLab

Tool

Git

Tracks your code versions on your computer.

Platform

GitHub

Hosts your repositories online for teamwork.

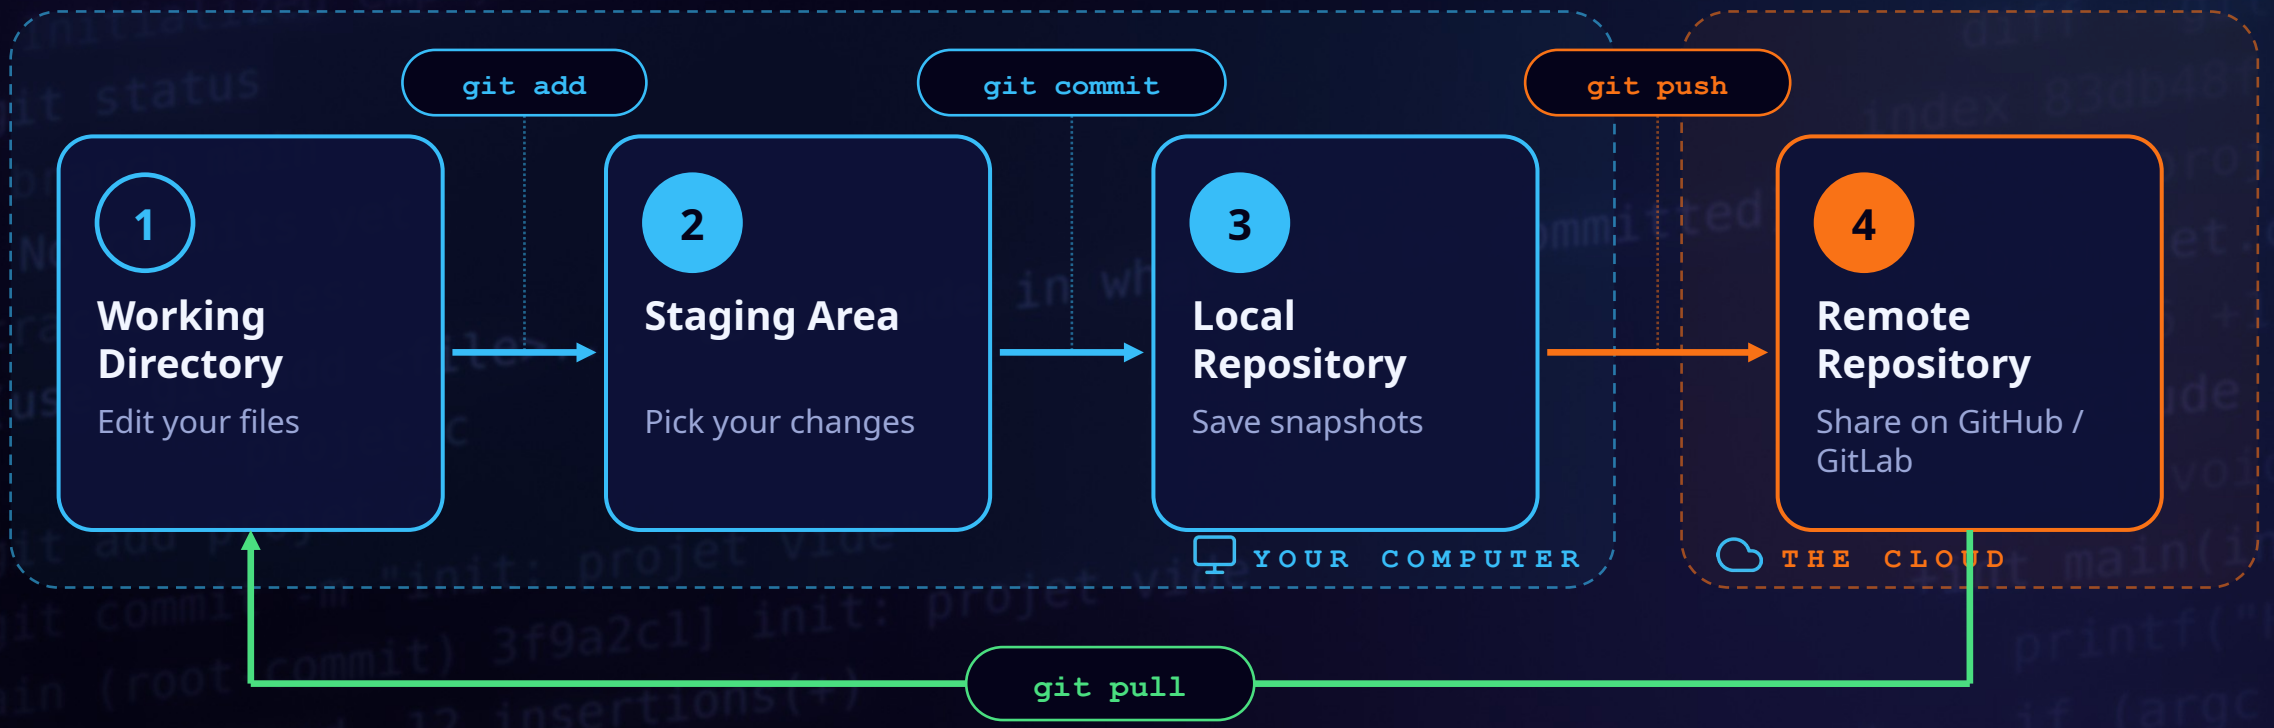

Platform

GitLab

Like GitHub, plus built-in CI/CD automation.

REMEMBER **Git is the tool. GitHub and GitLab are platforms built around it.**

How Git Works

Push shares your commits. Pull fetches your team's changes.

AppsClub

Basic Commands

```
> git init
```

Create a new repository.

```
> git status
```

Check the state of your files.

```
> git add
```

Stage your changes.

```
> git commit -m "message"
```

Save a snapshot.

AppsClub

Inspect & Share

> git diff

See what changed.

> git log --oneline

Browse your history.

> git push

Send commits to GitHub / GitLab.

> git pull

Fetch your team's changes.

AppsClub

Live Demo

Let's Practice!

SET UP

1 Create a folder `student-project` and initialize Git

```
> git init
```

2 Create a `README.md` with a title and description

```
> touch README.md
```

3 Check the repository status

```
> git status
```

COMMIT & INSPECT

4 Stage the file and make your first commit

```
> git add  ·  git commit
```

5 Edit the README and inspect the changes

```
> git diff
```

6 Commit the changes and show the history

```
> git commit  ·  git log --oneline
```

Thank you for listening!

Join us again next week!!
